FILTERS

Champion motorcycle filters are precision-engineered to match or exceed OE standards. They are made from the highest quality materials and manufactured to exacting standards ensuring virtually zero defects. On the road (and off the road) they deliver maximum performance with unrivalled protection.

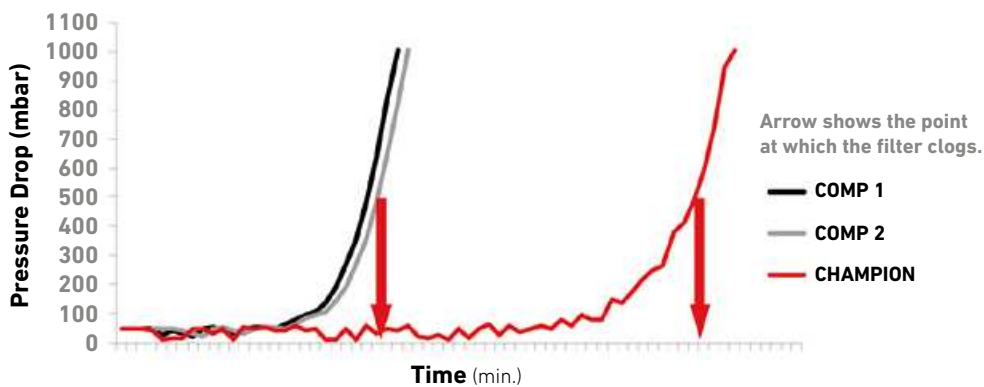

ADVANTAGES OF CHOOSING CHAMPION

Extended life

Independent tests, (ISO 4548 - oil, and ISO5011 - air) have shown that Champion filters outperform the competition. We guarantee quality across our entire motorcycle filter program.

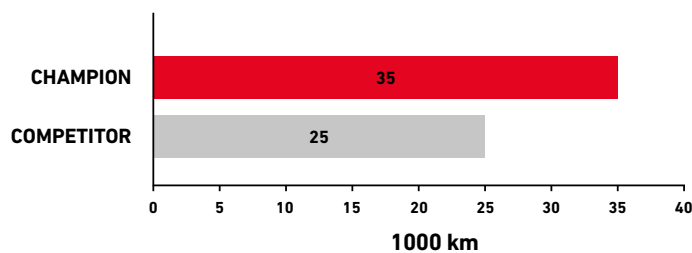

Life Cycle Efficiency

Tests carried out by independent source according to industry standard ISO 4548/4. The graph clearly shows that the Champion filter filters more efficiently than the competitor's filters.

Test carried out by independent source according to industry standard ISO 4548/4. The graph clearly shows that the CHAMPION filter filters more efficiently than the competitor's filters.

Service Life Filter Efficiency

SUPERIOR PERFORMANCE

Our filter paper is unique and impregnated with resin that removes even the most damaging contaminants from the oil. Pleated, cured and mechanically joined to guarantee 100% filtration.

- Impregnated with sophisticated fibres ensuring rigidity, good tensile and burst strength
- Layers of fibres integrated across each other give the paper depth and structure
- Filter paper traps particles on the surface and also locks them inside the media allowing far fewer particles through the engine

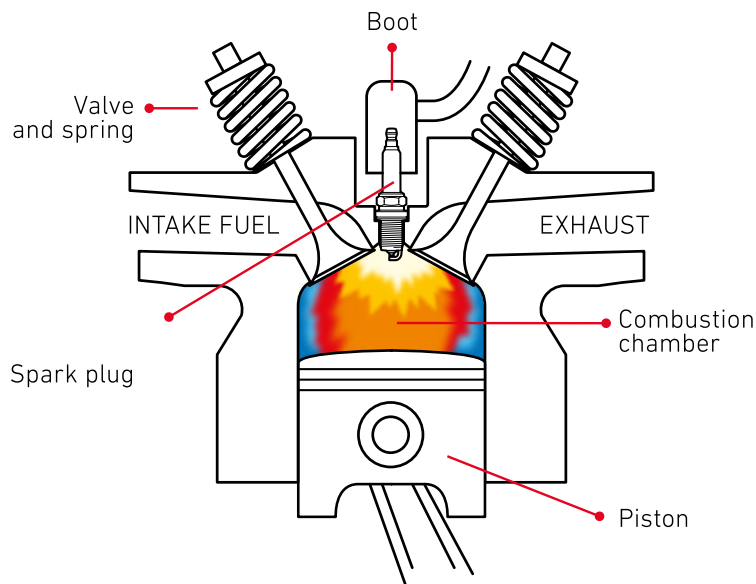

RELIABILITY WITH MAXIMUM ENGINE PROTECTION

WHAT DOES A SPARK PLUG DO?

Diesel-driven engines have glow plugs, petrol-driven engines have spark plugs.

The ignition system on petrol-driven engines is external: during the compression cycle the combustion of the compressed fuel-air mixture is triggered by an electrical spark produced by the spark plug.

Petrol-driven engines have an external ignition system: a spark plug conducts the spark to the combustion chamber where it initiates the combustion.

The spark plug generates this spark

Created by the high voltage produced by the ignition coil, it leaps between the electrodes. A flame front spreads from the spark and fills the combustion chamber until the mixture has been burned. The heat released increases the temperature, there is a rapid buildup of pressure in the cylinder and the piston is forced downwards.

The movement is transferred via the connecting rod to the crankshaft; this drives the vehicle via the clutch, the gears and the axles.

Spark plug requirements

In order for the engine to operate smoothly, powerfully and in an environmentally friendly manner the correct amount of perfectly balanced fuel/air mixture must be present in the cylinder, and the high-energy ignition spark must leap between the electrodes precisely at the predetermined moment.

For this purpose spark plugs have to meet the highest performance requirements: they must deliver a powerful ignition spark during hours of driving at high revs or in stop-and-go traffic conditions. Even at -20 °C, they have to ensure a completely reliable ignition. High-tech spark plugs provide low-emission combustion and optimum fuel efficiency.

Champion spark plugs are designed and manufactured using high quality materials to consistently meet these extreme requirements. Even at the engine development stage, Champion engineers work closely with the motor industry to ensure that the spark plugs are precisely adapted to specific conditions in the combustion chamber.

Champion offers a wide range of spark plugs to ensure that the optimum spark plug is always available for the many different engine types and applications. Diverse materials are used for the center and ground electrodes. This is the technology of the spark plug.

Each spark plug delivers non-stop sparks between around 500 and 3500 times a minute.

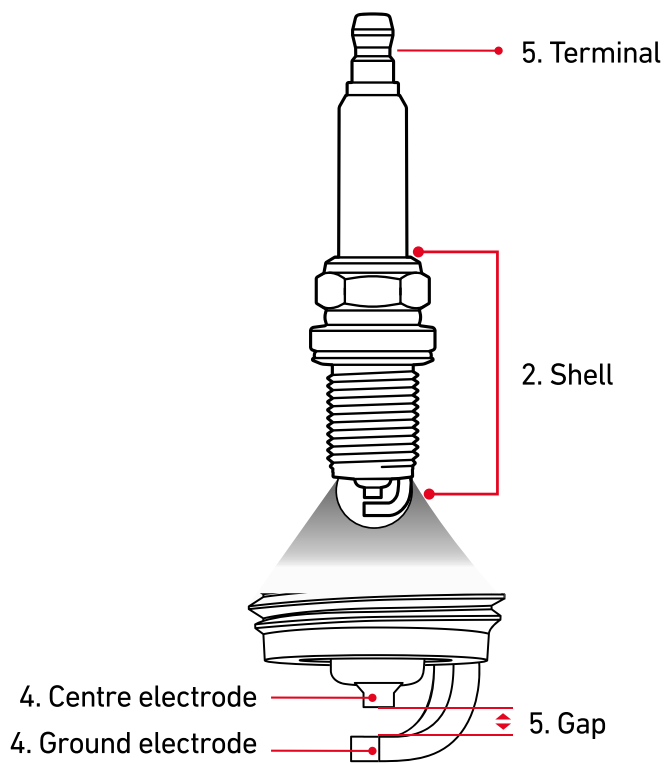

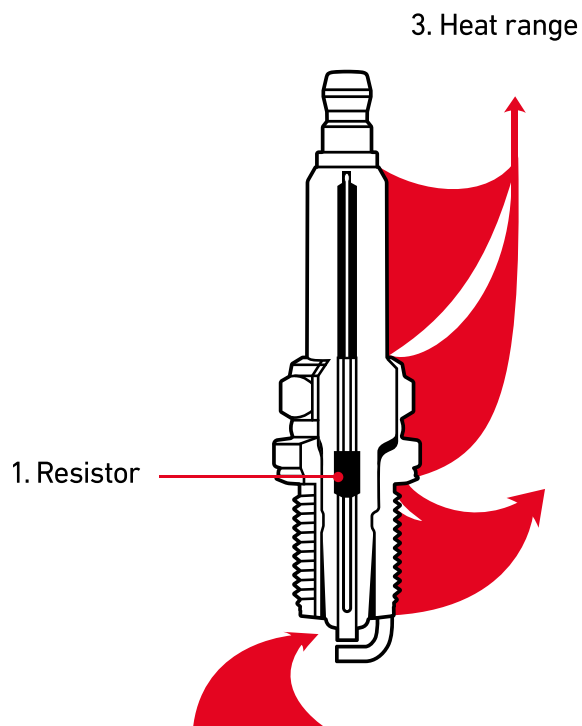

EVERY CHAMPION SPARK PLUG IS COMPOSED OF FIVE MAIN COMPONENTS

1. In today's plugs, a **resistor** is built in to eliminate radio frequency interference.
2. The **shell** is a threaded metal hex (made from extruded steel) that seals the combustion and makes it possible to install or remove the plug.
3. Each spark plug has its particular **heat range**. The insulator prevents secondary ignition voltage grounding anywhere else — other than the gap — and it moves the heat from the combustion process to the cylinder head (and into the cooling system).
4. The ground and centre **electrodes** position the spark in the ignition chamber.
5. The **gap** is the distance between the centre and the ground electrode. This is what the ignition spark must jump across. Finally, the **terminal** connects the plug to the ignition system.

Why this is important to you and your customers?

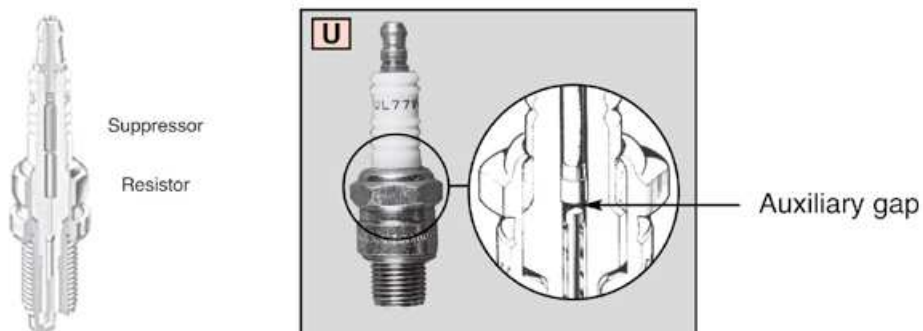

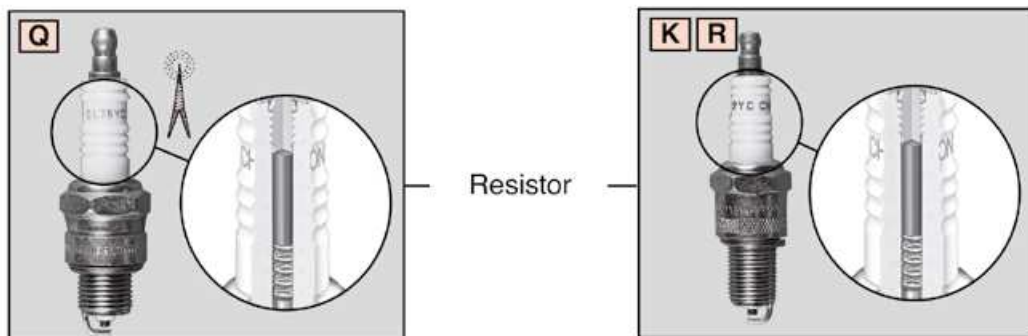

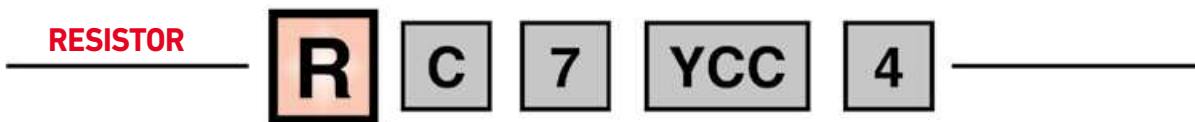

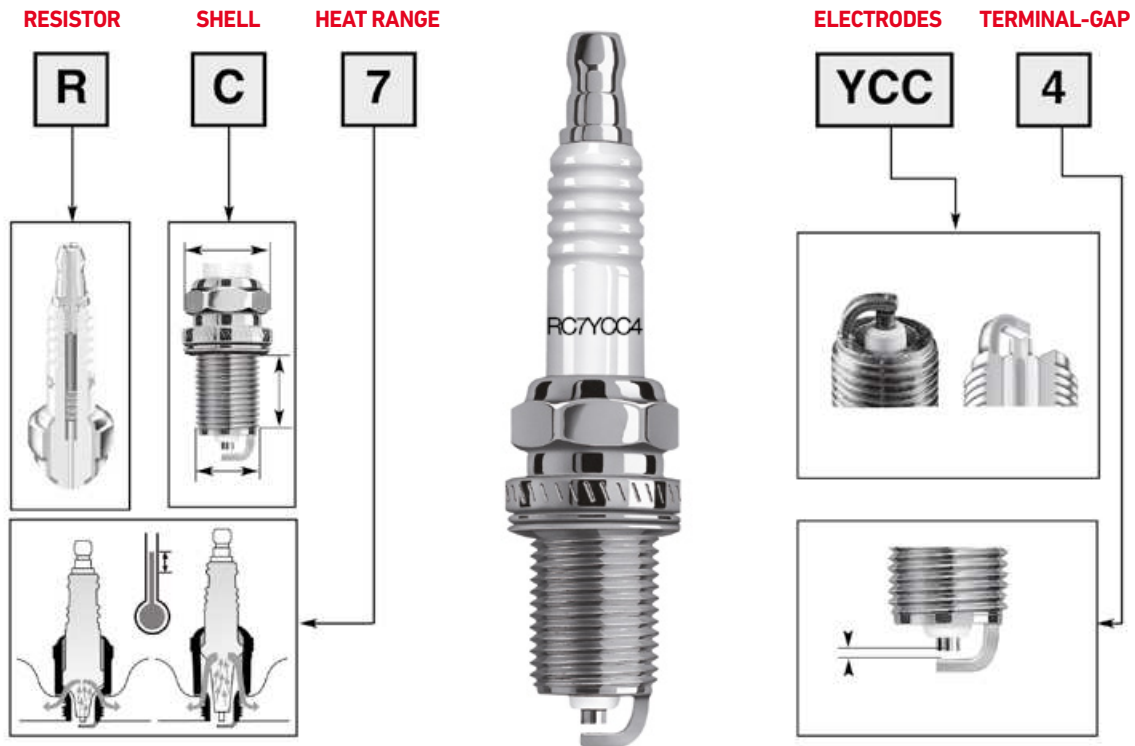

The performance and durability of a spark plug is determined by the characteristics of each of its parts. In order to help you choose the right plug and support your customers, we use our part numbers. Champion uses a part numbering system that gives you useful information on the different components and the characteristics of each spark plug.

Champion offers a wide range of spark plugs to ensure that the optimum spark plug is always available for the many different engine types and applications. Diverse materials are used for the center and ground electrodes. This is the technology of the spark plug.

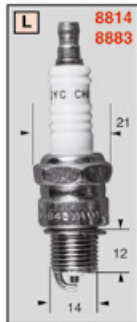

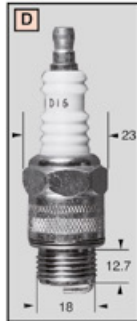

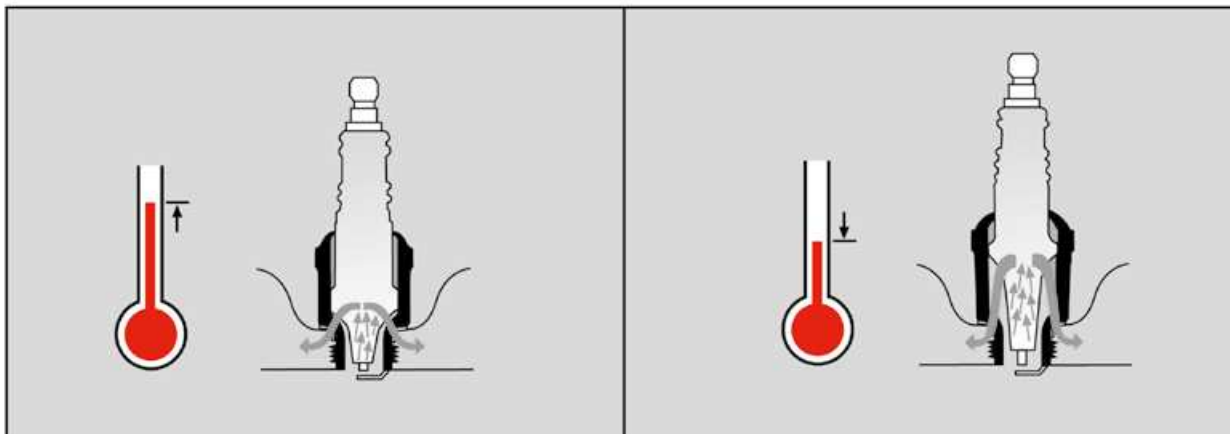

E.G. CODIFICATION OF RC7YCC4

SHELL

R **C** 7 YCC 4

COLD TYPE

Plug operates at higher temperatures & dissipates heat quickly

HOT TYPE

Plug operates at lower temperatures & retains more heat, dissipates slowly

For guidance only, use application data for correct recommendations

POWERSPORT™

POWER BOOST FIRING END

Fine-wire projected electrode design delivers more power and maximum fouling protection. V-trimmed ground electrode keeps spark concentrated through all engine demands.

'Q' - SUPPRESSOR

Wire-wound low-ohm resistor enables full ignition energy to reach the cylinder where it is needed most.

THERMAL CONTOUR FIRING TIP

Modifies electrode heat transfer to prevent deposits while idling and plug overheating during high-speed operation.

Fine-wire centre electrode and V-trimmed ground electrode produces the sharpest spark focus. Long life and performance that far exceeds conventional plugs.

CHAMPION POWERSPORT™ DESIGN

Extra strong terminal
to endure under extreme use

Q-Type Racing Specification Suppressor
for RFI Protection

Thermal Contour Firing Tip
(to 1.3mm)

Double Copper Technology
- Copper Core Centre Electrode
- Copper Core Ground Electrode

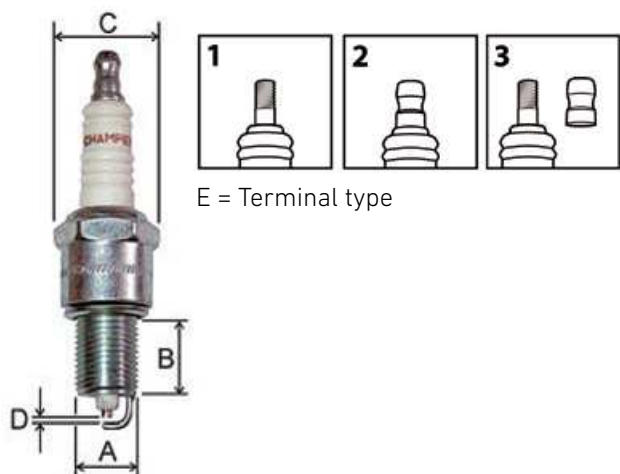

THERMAL CONTOUR FIRING TIP

Projected Core Nose

- Extended nose projection of the plug creates a longer path for heat to travel.
- The plug stays hot during periods of prolonged idling... preventing cold fouling.
- The plug stays cool at high RPM due to the charge cooling effect of the incoming air/fuel mixture.
- This gives POWERSPORT a much more dynamic heat range over standard plugs.

All of these characteristics allow you to use only one powersport code in replacement of different standard codes (see the table).

FEATURES & BENEFITS

PRO 5M / PRO 5U

90° RESISTOR BOOT

- 1. 5K resistor** suppress interference (RFI)
- 2. Ribbed seals on both ends** gives superior sealing at both ends to provide an effective moisture proof connection
- 3. Silicone jacket** provides superior heat resistance (up to 250°C)

PRO 0U

90° NON-RESISTOR BOOT

- 1. Ribbed seals on both ends** gives superior sealing at both ends to provide an effective moisture proof connection
- 2. Silicone jacket** provides superior heat resistance (up to 250°C)

SRO 5U

180° RESISTOR BOOT

- Ideal for competition/trial use**
- 1. 5 kΩ resistor** suppresses interference (RFI)
 - 2. Ribbed seals on both ends** gives superior watertight connection
 - 3. Silicone jacket** provides superior heat resistance (up to 250°C)
